Lead Entity: Chelan County

Specificity and Focus of Strategy

1. Species and stocks¹

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent² ___Good __X_Fair ___Poor

Narrative (rationale for rating):

Most of the species of salmonids in the lead entity area are listed along with their listing status.

Status of <u>all</u> species and stocks is not fully clarified and prioritized. For example, status of non-listed species is not included.

Listed species are given an implicit prioritization in the goal to achieve delisting, but the primary prioritization method used in this lead entity area is a watershed categorization based on several factors, including presence of listed species.

Coho are listed as extirpated, but no mention of their reintroduction to the area is provided.

Ranking criteria are not clearly consistent with priorities.

See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

² The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent ³	X_Good	Fair	Poor

Narrative (rationale for rating):

Habitat features are identified, but watershed processes are inadequately addressed.

The limiting factors are discussed and prioritized to some degree, although not through focused criteria or the application of a model.

More is needed on habitat-forming watershed processes and their linkages to habitat features.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

• Do the proje	set runking criteria rene	ct these prioritie	J.	
Rating:	X_Excellent ⁴	Good	Fair	Poor

³ The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

The watersheds within the lead entity area are categorized into categories 1 through 5 based on presence of listed species and other factors. Within each watershed, there is a list of specific action in priority order.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:		_Excellent ⁵	<u>X</u>	_Good	Fair	Poor
Marrativo	(ration	ala for rating	۵).			

Narrative (rationale for rating):

Community issues are identified in the strategy (but not the summary), but are not prioritized within or between watersheds.

The process for considering community issues in the identification and prioritization of projects is good.

Additional community support might be possible through strategically targeted outreach actions.

⁵ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating: ____Excellent⁶ ___X __Good ____Fair ____Poor

Narrative (rationale for rating):

All projects are highest priority actions.

Only 1 project is in a category 1 watershed (note – the reason for this was clarified in presentation).

Only one of the projects on the list (the instream flow project) involves a category 1 watershed, even though eight of the 18 watersheds are category 1. All other projects address priorities that are identified for those watersheds.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	X_Excellent ⁷	Good	Fair	Poor

⁶ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

⁷ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

In terms of geographic areas the order of the list is excellent.

The order of the list is consistent with the level of specificity in the strategy.

Transparency of the ranking process could be improved.

The projects all address stated priorities which are almost all in category 2 watersheds, so the strategy does not present a clear basis for prioritizing among projects.

Summary Narrative:

In general, the focus and specificity of the strategy are fairly good, and the fit of the list is good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a somewhat unfocused strategy).

Lead Entity: Foster Creek

Specificity and Focus of Strategy 1. Species and stocks8

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating:	Excellent ⁹	<u>X</u>	_Good	Fair	Poor
Narrative (rationale for rating):				

Species and their federal listing status are identified, along with a good description of where and when they are found in the watershed.

Species priorities are identified but are vague.

The ranking criteria do not apply any species prioritization except perhaps in the general scoring of "benefit to salmon."

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project rapking criteria reflect the above priorities?

•	Do the pro	bject ranking criteria rei	iect the above	priorities?	
Ra	ating:	Excellent ¹⁰	Good	X Fair	Poor

 9 The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

⁸ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

¹⁰ The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

There is a very good description of general ecosystem conditions, but it is difficult to tease out what factors are limiting in the watershed.

Specific problems are identified in the studied reaches, but they are not prioritized among themselves and the rationale is not fully clear.

Sediment problems are identified, but not in context of watershed processes linked to salmon or habitat limiting factors.

Limiting factors are not prioritized.

Ranking criteria don't directly reflect species priorities.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?

•	Dο	the	nroject	ranking	criteria	reflect	these	priorities?

20 1110 010	joot rainting onterna rot			
Rating:	Excellent11	X_Good	Fair	Poor
Narrative (ra	ationale for rating):			
•	entified in general for t	the entire waters	hed, but only th	e most
Prioritization v	vithin the watershed is	very unclear.		

¹¹ In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating: ___Excellent¹² ___Good __X_Fair ___Poor

Narrative (rationale for rating):

Outreach is evident but a clear strategy to be able to address highest priority biological needs is lacking.

To build and maintain stronger community support, it would help to take specific steps to address areas where there might not be full support at this time.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating: ___Excellent¹³ ___Good __X_Fair ___Poor

Narrative (rationale for rating):

The single project addresses an identified high priority issue (sediment), but it's unclear if it addresses the highest priority action or area.

¹² The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

6.	Fit	of _i	pro	ject	<u>ranı</u>	<u>king</u>
----	-----	-----------------	-----	------	-------------	-------------

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	Excellent14	Good	Fair	Poor			
Not Applicab	le						
Narrative (rationale for rating):							
	_						
NOTE – There is only one project on this list, limiting the value of this rating.							
			-	· ·			

Summary Narrative:

In general, the focus and specificity of the strategy are fairly good, and the fit of the list is fair.

⁻

¹⁴ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.
The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these

¹⁵ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

The strategy stresses limiting factors but is weak regarding watershed processes and linkages between processes and features.

Relies on the limiting factors report to develop priority basins and actions. The emphasis is more on habitat features than on processes.

While the limiting factors are listed for each subwatershed, more could be done to prioritize them so that sponsors would be guided to the most important projects first.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating:	Excellent18	Good	<u> X </u> Fair	Poor

Narrative (rationale for rating):

Good general description of actions/area, though specificity and rationales are sometimes weak.

App B (actions) is excellent.

Subwatersheds are prioritized through a clear and well-presented process, although it would be improved if the TAG were able to evaluate the subwatersheds using some of their other more meaningful watershed level criteria.

The work plan presents generalized strategies for dealing with what they consider the most pressing limiting factors. For each subwatershed, there is a list of projects that are prioritized.

Sometimes vague with regard to specific location or approach (e.g., "reduce water withdrawals").

The ranking criteria include consistency with the work plan.

¹⁸ In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Excellent²⁰

Rating:

bo the project ranking criteria reflect the priorities:
 Does the strategy provide for an effective process for evaluating and
weighing community values and taking these values into consideration when
developing and prioritizing project lists?
10
Rating:Excellent ¹⁹ XGoodXFair
Poor
Narrative (rationale for rating):
Good, but more could be done to proactively build support for priority actions/areas of highest biological priority.
The plan to implement a more detailed outreach plan will help helpter community
The plan to implement a more detailed outreach plan will help bolster community
support.
The existing plan could use milestones or short-term goals to provide focus.
Fit of the Project List to the Strategy
5. Actions and geographic areas
The Review Panel will consider:
 The extent the project list addresses the highest priority action and areas,
and
The extent that those actions and areas benefit the highest priority stocks,
limiting watershed processes, and limiting habitat features.

The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Good

Fair

Poor

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

Some projects are not in highest priority areas.

Only 4 (fewer than half) of the projects benefit the identified top priority species. Two of the projects are in low priority subwatersheds, and they are considered exceptions to the standard criteria. While the projects clearly will have benefits to salmon, they do not fit well within the current strategy. Part of the challenge might be that the current subwatershed prioritization method uses miles of habitat, which is as much an artifact of the way they drew subwatershed boundaries. Thus, projects in small subwatersheds are at a disadvantage, even if they open up a lot of habitat. The Anderson Road culvert project is on private property. It benefits coho, cutthroat and steelhead.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

	Rating:	Excellent ²¹	X_Good	Fair	Poor
--	---------	-------------------------	--------	------	------

Narrative (rationale for rating):

The broad geographic priorities and latitude in the ranking criteria provide a lot of latitude in ranking projects. Therefore, there appears to be little correlation between the priorities in the strategy (for stocks and for subwatersheds) and the rank order of the list.

However, the projects are ranked appropriately in relation to the criteria provided.

The amount of habitat that can be opened up by the #2 project is impressive, and it is easy to see how it ranks high, given that the evaluation and ranking of projects is done based on criteria that do not require a close tie to the strategy.

Summary Narrative:

In general, focus and specificity of the strategy are fair and fit of the list is fairly good.

²¹ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Lead Entity: Hood Canal Coordinating Council

Specificity and Focus of Strateg

1. Species and stocks²²

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: X Excellent²³ Good Fair Poor

Narrative (rationale for rating):

The strategy presents ESA listing and SaSI status by subwatershed.

Additional status information would be helpful, and it isn't clear if all salmonids in the area are identified.

The strategy clearly prioritizes stocks listed under the ESA over other salmonids.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent ²⁴	X_Good	Fair	Poor

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

²² See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

Good, but information on watershed processes was not clearly folded in.

The strategy relies on limiting factors information from other documents.

Rather than expecting project sponsors to read and understand all limiting factors information, the strategy provides a list of pre-screened project ideas that are consistent with the limiting factors. The RP feels this is a good practical approach even though it does not fully comport with the SRFB's "excellent" definition.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating: X Excellent²⁵ Good Fair Poor Narrative (rationale for rating):

ivaliative (lationale for lating).

Clearly identifies and prioritizes, and rationale is clearly described.

Noteworthy is that specific lists of priority projects were identified for each subwatershed. This provides a very valuable tool to direct attention to the highest priority actions in the highest priority areas.

The approach to prioritizing nearshore areas is a great step forward compared to saying the entire nearshore is (equally) important.

²⁵ In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating: ___Excellent²⁶ __X_Good ___Fair ___Poor

Narrative (rationale for rating):

Good outreach and support building; however, no prioritization or strategic approach to addressing unmet priorities.

The community issues are addressed in advance of and during project development, and again explicitly in the project ranking process.

The strategy refers to actions and programs underway to improve community support, and additional information would be needed to know if they are prioritized or directed at improving support for specific high priority actions that currently lack support.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating: ExcellentPool	Rating: Excellent ²⁷ X Good Fair Pool
------------------------------	--

²⁶ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

All top priorities are in highest priority areas and address documented limiting factors, but some projects are not in highest priority areas.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	XExcellent ²⁸	Good	Fair	Poor
Narrative (rat	ionale for rating):			
Rank order is co	onsistent with strategy.			

Summary Narrative:

In general, the strategy is well focused and specific, and fit of the list is good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a fairly well focused strategy).

RP recognizes the high degree of complexity and effort required across this diverse LE area.

²⁸ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Lead Entity: Island County

Specificity and Focus of Strategy

1. Species and stocks29

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent³⁰ ___X_Good ___Fair ___Poor

Narrative (rationale for rating):

The strategy does a good job of identifying the stocks that pass through the WRIA, but it does not clearly present the status of <u>all</u> of those stocks.

A group of the Chinook stocks is identified as top priority. However, this is not reflected in the ranking criteria.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating: ____Excellent³¹ ___**X**_**Good** ____Fair ____Poor

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

 $^{^{29}}$ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

Good general discussion of priorities, but not enough specificity.

Doesn't document how features are limiting, doesn't address watershed processes, and nearshore processes.

The strategy talks about habitat degradation and conditions in Island County streams and nearshore areas.

As is the case with other nearshore strategies, the strategy has not yet reached the point where the relative benefit of projects in the nearshore can be compared to projects in freshwater areas that have been analyzed in a consistent manner (e.g., a life cycle model).

In order to have clear support for actions to benefit salmon populations in nearshore areas, some estimate of the benefit of those actions and areas relative to freshwater habitats would be useful.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating: ____Excellent³² ___**X**__**Good** ____Fair ___Poor

³² In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

Priorities are clearly identified and supported.

Actions are not prioritized as clearly as needed.

Ranking doesn't support the priorities.

The strategy prioritizes protection over restoration, but the ranking criteria do exactly the opposite: projects can get 5 or 4 points on the first criterion for showing a net increase in habitat, but only a maximum of 3 points for protection habitat.

The strategy prioritizes the Whidbey Basin over Admiralty Inlet, consistent with the prioritization of stocks.

The strategy talks about priorities, and it would be even clearer if the specific actions (such as those listed in Table 12) were prioritized.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:Excellent ³³	Good	Fair	<u>X</u> Poor
--------------------------------	------	------	---------------

³³ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Identifies community issues and concerns.

Addresses them on a case-by-case basis.

No community interests strategy, and contains no priorities.

Island County uses a case-by-case approach for identifying and addressing community issues.

A more proactive approach could be developed to provide even greater guidance to potential project sponsors about what projects are likely to be supported.

Actions are not identified or prioritized to build community support, even in the areas where community concerns have been identified.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating:	Excellent ³⁴	Good	<u>X</u> Fair	Poor
---------	-------------------------	------	---------------	------

Narrative (rationale for rating):

The strategy prioritizes protection over restoration for several reasons.

The project list includes a restoration project and an assessment.

One project on the list is in a priority area whereas the other project is not in the highest priority area and is an assessment.

³⁴ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	<u>X</u> Excellent ³⁵	Good	Fair	Poor
Narrative (r	rationale for rating):			

Note – there are only two projects on this list, limiting the value of this rating.

Summary Narrative:

In general, the focus and specificity or the strategy, and fit of the list are fair.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a fairly unfocused strategy).

LE emphasized that their strategy is in flux, and will change.

Kudos to the LE for their candid and direct self-appraisal as reflected in their presentation material.

³⁵ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Lead Entity: King County WRIA 8

Specificity and Focus of Strategy

1. Species and stocks³⁶

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent³⁷ __X_Good ___Fair ___Poor

Narrative (rationale for rating):

The strategy focuses exclusively on Chinook salmon as the priority species.

The strategy summary includes the listing status of Chinook salmon and the other salmon populations in the area, but very little information about stock status.

Listed Chinook salmon and bull trout are identified as priorities in the strategy summary, but bull trout are not discussed in the strategy.

The rationale for not including them (and coho as was mentioned in presentation) is unstated.

Only Chinook salmon appear to be given extra credit in the criteria.

³⁶ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

³⁷ The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	<u>X</u> Excellent ³⁸	Good	Fair	Poor

Narrative (rationale for rating):

Comprehensive but could be more clearly articulated.

Could go farther in prioritizing within identified habitat features and watershed processes.

The assessment work done in this watershed is significant. It identifies a number of habitat features and some watershed processes, and it uses EDT as a tool to identify the ones that appear to offer the greatest opportunities for protection and restoration in each subarea.

This approach seems to bypass the identification of which factors are limiting and which are the highest priority, and instead looks at where future actions will make the greatest difference

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating: X Excellent ³⁹ Good Fair	Poor
---	------

³⁸ The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

Geographic prioritization is excellent.

Prioritization of actions is weak.

Actions and areas are prioritized in the summary but not clearly articulated in strategy.

The strategy lists the highest priority areas and the highest priority categories of actions within each area.

Although it prioritizes geographic areas, it could be more focused if it did not treat every area used by the core populations as equally important.

Additional effort to distinguish which migratory corridors (i.e., lake subareas) may be most limiting would be useful.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

	_	, , , , , , , , , , , , , , , , , , , ,	1		
Rating:		Excellent ⁴⁰	X Good	Fair	Poor

⁴⁰ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Excellent if based on summary and presentation, but RP was unable to find supportive documentation in strategy needed to achieve excellent rating.

Tailoring to each high priority sub-area is excellent.

The strategy lists outreach and education activities to build community support, although they are not prioritized and it is not clear that they are targeted toward increasing community support for the specific actions that are the highest biological priorities.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating:	X	Excellent ⁴¹	Good	Fair	Poor
	/	s \			

Narrative (rationale for rating):

All of the projects address the priority species (Chinook salmon).

Three of the 5 projects are on the Cedar, the highest priority area identified by the lead entity, and the other two are in high priority areas for Chinook that spawn in other parts of the WRIA.

The list of projects appears to balance protection and restoration consistent with the strategy, and to address high priority issues in each area, but it is not entirely clear that they are addressing the highest priority habitat or watershed process issues.

⁴¹ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	X_Excellent ⁴²	Good	Fair	Poor

Narrative (rationale for rating):

Rank order is consistent with strategy.

The description of how the rank order of the projects addresses the top priority populations first and the top priority reaches for each population is clear.

Summary Narrative:

In general, the focus and specificity of the strategy are very good, and the fit of the list is excellent.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a fairly well focused strategy).

⁴² The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Lead Entity: King County WRIA 9

Specificity and Focus of Strategy

1. Species and stocks⁴³

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent⁴⁴ __X_Good ___Fair ___Poor

Narrative (rationale for rating):

In the strategy and strategy summary, all stocks are identified but the status of <u>all</u> species is not.

Priorities are identified but rationale was somewhat vague.

Priorities seemed to be inconsistently applied throughout the strategy, and were not consistent with ranking criteria.

The prioritization is not entirely clear and consistent across documents.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

	 J			
Rating:	X Excellent 45	Good	Fair	Poor

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

 $^{^{43}}$ See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

Habitat features and watershed processes are generally well identified and prioritized, (with the exception of nearshore).

Matrix is a clear and useful tool (but summary and strategy are less clear).

The limiting factors work identifies habitat issues but does not clearly prioritize them.

Strives for an ecosystem, multi-species approach, addressing VSP for Chinook salmon. Both are valuable, but the result is that anything that benefits juvenile survival is a priority.

Additional focus could help guide future project sponsors to more strategic priorities.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating:	Excellent ⁴⁶	<u>X</u> _Good	Fair	Poor

Narrative (rationale for rating):

Good approach through use of reaches (in matrix), but lacks specificity.

RP recognizes the LE is in the process of prioritizing areas and actions. The initial priority areas are a good start, although they still cover a very large area (i.e., the entire mainstem and all nearshore areas).

⁴⁶ In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:Excellent ⁴⁷ GoodX_Fair	rPoor
---	-------

Narrative (rationale for rating):

General outreach and public participation exists but could be better described.

Could be more strategic at addressing highest priority community issue needs.

Rationale for balance between freshwater and nearshore is not fully transparent.

The strategy and strategy summary focus on the community issues as they pertain to support for submitted projects.

The public education and outreach plan is mentioned, but more detail would be needed to know if it is focused on increasing support for top priorities.

The description of how the previous bulkhead removal project builds support for needed high priority bulkhead removal was helpful.

⁴⁷ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating: ____Excellent⁴⁸ _____Fair ____Poor

Narrative (rationale for rating):

All projects are in high priority areas.

It is not clear that the balance of freshwater and nearshore projects is consistent with the strategy.

Project at bottom of list doesn't well align with strategy.

The strategy emphasizes projects in the mainstem Green/Duwamish, the lower reach of Newaukum Creek, and the nearshore.

It is not entirely clear that the amount of investment (reflected by the list) in the nearshore is consistent with the strategy, or the extent to which nearshore habitat improvements will address the highest priorities for recovery.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions

Geographic areas

Community interests

Rating:	X_Excellent 49	Good	Fair	Poor

⁴⁸ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Projects most inconsistent with the strategy are at the bottom of the list.

Summary Narrative:

In general, the focus and specificity of the strategy, and the fit of the list are good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a somewhat unfocused strategy).

Lead Entity: Kitsap County

Specificity and Focus of Strategy

1. Species and stocks⁵⁰

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ____Excellent⁵¹ ____**X_Good** ____Fair ____Poor

Narrative (rationale for rating):

Requested information on species and their status is not in the final strategy document, but is in the summary provided with the lead entity submittal. Documentation is lacking.

Stocks are not prioritized, and there are gaps in the status information.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating: ___Excellent⁵² ___Good __X_Fair ___Poor

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

 $^{^{50}}$ See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

Requested information is not in the final strategy document. Documentation is lacking.

Summary contains information that is not in strategy.

The summary describes stressors, and it relies on the limiting factors report for limiting factors. This doesn't make the information very accessible to potential project sponsors and it doesn't adequately address watershed processes. It does take a very positive step toward identifying important nearshore limiting factors.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rati	ng:	Excellent ⁵³					<u>X</u> _Good	Fair	Poor

Narrative (rationale for rating):

Watersheds are prioritized based on salmon populations, habitat quality and watershed size.

Rather than actions, the strategy summary describes objectives based on the limiting factors. This leaves potential project sponsors to determine what actions might be appropriate.

Appendix E identifies and prioritizes actions.

All nearshore is Tier 1 high priority. Treating the entire nearshore as a high priority is no more useful than a watershed that treats the entire watershed as a high priority.

More recent recent characterization of nearshore is providing prioritization and project possibilities but is not included in the current strategy.

⁵³ In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating: ___Excellent⁵⁴ ___Good __X_Fair ___Poor

Narrative (rationale for rating):

Very general and vague.

Projects can rank higher if they include more of a community support element, but the strategy does not go as far as identifying community issues and concerns related to highest biological priorities, or proposing and prioritizing actions to address them.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating:	Excellent ⁵⁵	X_Good	Fair	Poor

The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

One project is not in the highest geographic area (Tier 1).

The projects address priorities in the strategy and strategy summary, but the extent to which some of them address issues in the nearshore is very unclear.

The number one ranked project is a nearshore assessment that sounds more like a local government planning exercise to identify critical areas for protection, than an assessment that would lead directly to projects.

However, since it is identified as a data gap, it is consistent with the strategy.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	Excellent ⁵⁶	X_Good	Fair	Poor

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Protection of nearshore areas is highest stated priority.

Both projects 1 and 3 are nearshore projects, but project 3 is a protection project while project 1 is a continuation of the nearshore assessment. These projects appear to be out of alignment with the strategy (lower and highest, respectively).

The ranking critieria that rates fit to strategy rated project 1 as Med/High and Project 3 as High.

In addition, project 2 is a restoration project with a lower certainty of success rating than project 3.

The ranking process gives final ranking discretion to the CAG and allows the CAG to move projects within the ranking based on a consensus decision.

Summary Narrative:

In general, the focus and specificity of the strategy are fairly good, and the fit of the list is good.

Lead Entity: Klickitat County

Specificity and Focus of Strategy

1. Species and stocks 57

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: X Excellent Good Fair Poor

Narrative (rationale for rating):

Identifies species and stocks (but not pops yet).

Clarity of prioritization rationale is among the best in the state.

Priorities are consistent with ranking criteria.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating: ____Excellent⁵⁹ ___**X**_**Good** ____Fair ____Poor

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

⁵⁷ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

Habitat features are identified and prioritized.

Limiting factors include some watershed processes as well as habitat features, but there is little discussion of the linkage between the two.

The strategy makes excellent progress toward identifying and prioritizing watershed processes, though the approach makes conceptual, not empirical linkages to habitat features.

The matrix is clear and useful.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rati	ng:		<u>X_</u> E	хсе	llent ⁶	0	Good	 Fair	Poor

Narrative (rationale for rating):

Concisely identifies actions and areas and prioritizes them.

Very clear identification and prioritization of geographic areas developed with clear rationale.

Types of actions are listed which may evolve into more specific actions and priorities in the future.

⁶⁰ In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	X_Excellen	it ⁶¹	Good	Fair	Poor

Narrative (rationale for rating):

NOTE – This is the only strategy reviewed by the RP that identified and described community issues and limitations, as well as a systematic approach to address them.

The strategy doesn't prioritize the community issue limitations.

Explicitly identifies project-specific linkages.

The lists of community values that support or limit particular types of projects gre very valuable.

Community values (both support and limitations addressed) are included in the evaluation criteria and ranking process.

Fit of the Project List to the Strategy

5. Actions and geographic areas

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

<u> </u>				
Rating:	Excellent ⁶²	X_Good	Fair	Poor

⁶¹ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

All projects are not in highest priority area.

Three of the four projects address top priorities, and the remaining one is in a lower-ranked area, but it carries out the top priority in that area.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	Excellent ⁶³	X_Good	Fair	Poor
---------	-------------------------	--------	------	------

Narrative (rationale for rating):

The rationale is not fully transparent.

The Snyder Creek project is in a lower priority area than projects that rank in the top priority area. Reasons for this (community support through citizen's committee) were clarified in the presentation.

Summary Narrative:

In general, the focus and specificity of the strategy are excellent, and the fit of the list is good.

⁶³ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Lead Entity: Lower Columbia Fish Recovery Board

S	pecificity	and	Focus	of	Strateg	y
---	------------	-----	--------------	----	---------	---

1. Species and stocks64

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: <u>X_Excellent</u>⁶⁵ ____Good ____Fair ____Poor

Narrative (rationale for rating):

Uses a complex but very rational approach, given large and diverse area.

Clearly presents the stocks and their status by watershed within the region. The strategy summary does not describe the prioritization process for species, and the strategy itself was not included in the new materials, but it does identify watersheds that are primary, contributing and supporting for the various species.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent ⁶⁶	<u>X</u> _Good	Fair	Poor
---------	-------------------------	----------------	------	------

⁶⁵ The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

⁶⁴ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

Note - although watershed processes are not described in the strategy summary, the strategy document is one of the few that provide a context for habitat restoration through a general discussion of watershed processes in the different WRIAs.

The summary of the IWA analysis included in the strategy is intended to characterize processes more completely, even though it doesn't result in clear priorities.

The linkages and relationships between watershed processes and habitat features are not very specific.

The EDT-based analysis clearly identifies the habitat features that appear to be the most significant opportunities for protection and restoration of the target species in each watershed.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating: Excellent ⁶⁷ Good X Fair Poor				<u>~_</u> - -	
	Rating:	Excellent ⁶⁷	Good	X Fair	Poor

Narrative (rationale for rating):

The RP recognizes complexity across the LE area and progress made. However, no specific actions were identified or prioritized within the geographic strata (as acknowledged by the LE).

Geographic areas and priority reaches are clearly identified with a clear rationale based on the populations they support and on EDT, respectively.

This approach assigns higher priorities to where the populations are currently doing well, which seems reasonable for protection actions, but may be questionable for restoration actions.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating: ___Excellent⁶⁸ ___Good __X_Fair ___Poor

Narrative (rationale for rating):

Excellent outreach process, but could do more to strategically address community issue needs. Proactively seek projects to address highest priority actions/areas.

Builds support through meetings, individual communications, and through the lead entity process.

Improvements could involve strengthening identification of community issues in advance and using that to guide prioritization of future actions, and by developing a strategy to build support from the broader community.

Fit of the Project List to the Strategy

5. Actions and geographic areas

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

J		<u>'</u>			
Rating:	Exc	ellent ⁶⁹	X Good	Fair	Poor

⁶⁸ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

⁶⁹ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

Half of projects are not in highest priority areas.

While the majority of the projects address primary species and/or group A watersheds and/or tier 1 reaches, half of them do not meet all of these criteria.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating: ___Excellent⁷⁰ __X_Good ___Fair ___Poor

Narrative (rationale for rating):

Good, but some inconsistent alignment between order of projects and priority order.

Ranking system orients to identified needs.

Provides excellent transparency for how the ranking was done. Some of the elements of the ranking, by design, allow factors that are not addressed in the strategy to come into play.

A couple project proposals (e.g., Grays River bar and Middle Wind habitat enhancement) got lower scores in some areas (for good reasons) which lowered them on the list relative to the strategic priorities, and at least one proposal (the carcass study) appeared to get a higher score than would be expected from the strategy.

⁷⁰ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Summary Narrative:

In general, focus and specificity of the strategy are fairly good, and the fit of the list is good.

Greater specificity in the connection of watershed processes and identification of specific actions could focus sponsors attentions in higher priority areas.

The RP recognizes the high level of complexity and effort applied to this very diverse LE area.

Lead Entity: Mason Conservation District

Specificity and Focus	of Strategy
-----------------------	-------------

1. Species and stocks71

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ____Excellent⁷² ___**X_Good** ___Fair ___Poor

Narrative (rationale for rating):

Clearly described but not prioritized.

Includes a good description of all the stocks that spawn in the WRIA, as well as stocks that are likely to rear in the area. The official SaSI status of many of the stocks is unknown, and the strategy presents some additional information for them.

The stocks are not explicitly prioritized.

2. Habitat features and watershed processes

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent ⁷³	X_Good	Fair	Poor

⁷¹ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and

Watershed processes and linkages to habitat features are very weakly addressed.

Using the limiting factors analysis e sub basin summaries were provided in the strategy that lay out a fairly clear linkage between habitat conditions, limiting factors and species.

The most important limiting factors are listed, but not prioritized.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating:	Excellent ⁷⁴	<u>X</u> Good	Fair	Poor

Narrative (rationale for rating):

Did not specifically prioritize actions across areas, but did better within areas.

Intended to maintain community support for their work, this lead entity chose not to prioritize geographic areas or specific actions.

LE provides annual guidance to avoid a random and opportunistic approach, and the watershed sections of the strategy list high priority actions.

Actions cover the WRIA and there are so many that it is not clear how useful the lists are for guiding sponsors toward strategic priorities.

supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

acveloping	developing and prioritizing project lists:							
Rating:	Excellent ⁷⁵	X_Good	Fair	Poor				
Narrative (rationale for rating):								
Outreach is go	od.							

Innovative ideas were brought forth about generating community support.

Community issues are considered in the project ranking process and there is some discussion of actions being taken to increase community support.

Fit of the Project List to the Strategy

5. Actions and geographic areas

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating:	Excellent ⁷⁶	<u>X</u> Good	Fair	Poor

⁷⁵ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

⁷⁶ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The description of the nearshore project development proposal indicates it is following from two previous nearshore assessments funded by the SRFB.

Description of the top ranked project indicates it follows from the previous assessment work, so it is unclear what additional work is requested here. The project sounds much more like planning than assessment.

The top-ranked project and the fourth-ranked project are mentioned in the high priority actions of the strategy, but the others do not appear to be.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating: ____Excellent⁷⁷ ___X_Good ____Fair ____Poor

Narrative (rationale for rating):

All projects fit, but this is a concern because stocks were not prioritized, but the criteria and projects reflect a preference for benefiting multiple species and stocks. (i.e., leading to a higher rating than might otherwise have occurred).

Since the strategy does not prioritize geographic areas or actions, the rank of the project list is developed by independent evaluation against the criteria. The list does seem to reflect those criteria, but this opportunistic approach of ranking any project that comes in does not necessarily guide sponsors to the most strategic priorities (as outlined in the SRFB Guide to Lead Entity Strategy Development).

⁷⁷ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Summary Narrative:

In general, focus and specificity of the strategy, and fit of the list are good.

The rank order of the list is consistent with the level of specificity in the strategy (a reasonable but indeterminate fit to a fairly unfocused strategy).

Lead Entity: Nisqually

Specificity and Focus of Strategy

1. Species and stocks 18

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: X_Excellent⁷⁹ ____Good ____Fair ____Poor

Narrative (rationale for rating):

Complete and clear.

The prioritization of stocks is one of the more complex approaches, but it is well presented and supported. While the species priority is not directly evaluated by the ranking criteria, it is implicit because of the way the geographic priorities were selected.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating: X Excellent⁸⁰ X Good Fair Poor

 $^{^{78}}$ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

Very good - Among the best in the state at articulating watershed processes and how they contribute to habitat conditions in the basin, but more information on watershed processes and habitat conditions is available that could be incorporated into the strategy materials to provide greater focus for project sponsors.

The information provided was primarily at a sub-basin scale.

The EDT analysis used does an excellent job of identifying habitat problems for the modeled species and providing a basis for prioritization. EDT itself is less effective and explicit at identifying and prioritizing watershed processes, but the watershed process information is underlying the analysis. The strategy summary gives an overview of watershed processes, but the strategy itself does not.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating:	Excellent ⁸¹	Good	<u>X</u> Fair	Poor
Narrative (r	ationale for rating)	•		

•

Good, but lacks action specificity.

Includes a list of prioritized general actions in specific geographic areas. Clearly presented, providing guidance to potential project sponsors, and could be even more valuable if it included more specific projects and sites.

The ranking criteria do not rely directly on the list of priorities, but they apply the same criteria.

⁸¹ In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ⁸²	<u>X</u> _Good	Fair	Poor

Narrative (rationale for rating):

Good but more information existed than was provided.

There are good examples of outreach in this LE through publications such as the Nisqually newsletter, but the summary and strategy do not clearly identify community issues or provide a strategy for addressing possible issues.

They clearly identified outreach processes not issues.

Uses approach primarily through lead entity, and there are also specific actions listed that are taken by other organizations to build community support. These actions are not prioritized.

The project ranking criteria address both the level of current support and the potential for the project to increase community support. Part of the value of having the strategy clearly identifying salmon recovery actions that do and do not enjoy strong community support is to guide additional project sponsors toward successful projects.

⁸² The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Fit of the Project List to the Strategy 5. Actions and geographic areas The Review Panel will consider: The extent the project list addresses the highest priority action and areas, The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features. Excellent⁸³ X Good Rating: Fair Poor Narrative (rationale for rating): All projects do not address <u>highest</u> priority areas. 6. Fit of project ranking The Review Panel will consider the extent the rank order of the project list addresses the highest priority: Stocks Limiting watershed processes Limiting habitat features Actions Geographic areas Community interests X Excellent⁸⁴ Rating: Good Fair Poor Narrative (rationale for rating):

Well articulated.

Scoring criteria and the resulting list are consistent with the strategy.

Emphasize continuing to focus future work on completing the highest priorities as much as possible first (as with the estuary, where they suggest all practical projects are already underway).

⁸³ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Summary Narrative:

In general, the focus and specificity of the strategy, and the fit of list are good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a fairly well focused strategy).

Lead Entity: North Olympic Peninsula Lead Entity

S	pecificity	and	Focus	of	Strateg	٧

1. Species and stocks85

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent⁸⁶ ___X_Good ___Fair ___Poor

Narrative (rationale for rating):

The stocks in each geographic unit are identified, their federal listing and state status is noted, and additional estimations of trends by the lead entity are provided.

Prioritization of habitat areas is based in part on the status of stocks. So, although the stocks themselves are not prioritized, there is some implicit prioritization given to listed species.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent ⁸⁷	X Good	Fair	Poor
itating.	LACCIICIT	<u>_X</u> _0000	1 an	1 001

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

 $^{^{85}}$ See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

Limiting factors and watershed analyses were used, but watershed processes referenced were very unfocused and unclear.

Some of the areas have more detail than others, and watershed processes are only treated superficially, but the strategy does point to high priority limiting factors based on the limiting factors analysis and additional lead entity work.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating: X Excellent Good Fair Poor

Narrative (rationale for rating):

Note – this is among the clearest and most focused treatment of actions and areas reviewed by the RP.

The lead entity area is divided into 24 geographical units. Using clear and explicit criteria, 13 of them were selected as tier 1 areas. The others go into tiers 2 through 4.

In some (but not all) of the areas, there are very specific lists of prioritized actions based on criteria.

The ranking criteria clearly and explicitly implement the priorities in the strategy.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating: ___Excellent⁸⁹ __X_Good ___Fair ___Poor

Narrative (rationale for rating):

Extensive outreach, but could do more regarding a strategic approach to community needs/issues, including specifically prioritized actions to proactively address community needs/issues.

Describes a clear process for incorporating community values and the scoring criteria consider whether the project will build community support and other values.

Actions are described for building community support, but they are not prioritized.

There are some project types that do not currently have community support, and it is not clear if specific actions are underway or planned to address this.

Fit of the Project List to the Strategy

5. Actions and geographic areas

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

	p. 000000, a			
Rating:	Excellent ⁹⁰	X_Good	Fair	Poor

The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The entire project list addresses the highest priority actions and areas, benefiting the highest priority

Most of the projects are in tier 1 watersheds, but some are in tier 2.

Most appear to be consistent with the strategy.

In areas where the strategy has prioritized lists, the projects tend to be on those lists, but not necessarily at the top. For example, in the Dungeness, the LWD and Water Conservation projects are ranked #1 and #2 on the lead entity prioritized list. They are prioritized in the strategy as #6 and #4, but the higher priority projects are either already underway or moving more slowly due to socio-political reasons.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

	0.1			
Rating:	<u>X</u> Excellent	Good	Fair	Poor

Narrative (rationale for rating):

Very transparent approach to ranking.

The ranking generally follows the priorities explicit and implicit in the strategy.

There are some cases, as with the two top projects in the Dungeness, where the projects appear in a different order than in the strategy.

stocks and the highest priority habitat features and watershed processes.

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Summary Narrative:

In general, the focus and specificity of the strategy and fit of the list are good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a fairly well focused strategy).

RP recognizes the high degree of complexity and effort required across this diverse LE area (e.g., includes areas with listed species, and other areas without listings).

Lead Entity: Okanogan County/Colville Tribe

Specificity and Focus of Strategy

1. Species and stocks92

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent⁹³ ___X_Good ___Fair ___Poor

Narrative (rationale for rating):

The strategy summary was not informative.

The strategy identifies the stocks, gives their status and identifies focal species for each assessment unit, but it does not explicitly prioritize the stocks.

Stock priorities are not reflected in the project ranking criteria, although they may be considered by the RTT.

Coho are identified as extirpated, but no mention of their reintroduction to the area is provided.

2. Habitat features and watershed processes

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent ⁹⁴	X Good	Fair	Poor

 $^{^{92}}$ See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

⁹³ The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and

Habitat features are identified and prioritized by assessment unit, but watershed processes are not clearly identified or prioritized, and linkages between habitat features and watershed processes are not clarified.

The EDT model runs clearly identify the habitat factors that are believed to be most significant in each assessment unit for the species that were modeled.

The large number of assessment units and the large number of limiting factors and strategies in each one (often 30 or more strategies) made it very difficult to determine what should be done <u>first</u> to protect and restore and protect salmon.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating:	Excellent ⁹⁵	<u>X</u> _Good	Fair	Poor

Narrative (rationale for rating):

A very detailed list of actions is identified, but is not prioritized.

Assessment units are prioritized based on EDT. For each assessment unit, they list primary and secondary habitat issues, and within each of them there are numerous strategies. All of this assessment work is outstanding, and it may be most useful if some additional planning work is done to determine what specific actions should be taken and in what sequence to address habitat features and watershed processes.

[Note -

Geographic boundaries of the area covered are unclear. The strategy covers all of the county, but then says that is all of WRIA 48 and 49 plus part of 60. In the presentation, the RP heard that only the Okanogan and Methow watersheds are covered, which leaves out portions of WRIA 48 and 49 on the mainstem Columbia.]

supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating: ___Excellent⁹⁶ ___Good __X_Fair ___Poor

Narrative (rationale for rating):

Considerable outreach and participation is evident but a clear strategic approach to enable addressing the highest priority biological actions and areas is not.

The primary method given for identifying and incorporating community interests is through the project ranking process. The strategy summary lists characteristics that generally lead to higher or lower community support, but it does not say what projects meet those characteristics and what steps will be taken to increase support.

Fit of the Project List to the Strategy

5. Actions and geographic areas

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating:	Ex	cellent ⁹⁷	X_Good	Fair	Poor

The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

It's unclear how highest priority actions are addressed, since actions are not prioritized.

The summary of the fit to list focuses on the process and does not discuss (and perhaps obscures) how well this particular list of projects matches the strategy.

Based on RP review of the priorities (assessment units and primary/secondary factors within those assessment units), all but one of the projects occurs in high priority assessment units and all but one addresses primary factors within those assessment units.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating: ___Excellent⁹⁸ ___Good __X_Fair ___Poor

Narrative (rationale for rating):

The information on technical rankings is not consistent with the final list.

The temperature assessment in a B priority assessment unit is ranked above several other projects in A priority assessment units.

The ranking system provided is not clear so rank order is also unclear.

The method of ranking projects and combining the ranks of individual reviewers makes it difficult to determine how much influence the strategic priorities have on the final rank order of the list.

⁹⁸ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Summary Narrative:

In general, the focus and specificity of the strategy, and the fit of the list is good.

Lead Entity: Pacific County

Specificity and Focus of Strategy

1. Species and stocks99

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent 100 ___Good __X_Fair ___Poor

Narrative (rationale for rating):

The strategy does not identify <u>all</u> the stocks and their status.

Stocks/species are not prioritized. Salmon and steelhead are indicated as general priorities. Economic or recreational values should be considered to aid prioritization.

There are no species listed under the ESA in this area.

Stock status does not play into the project ranking criteria.

2. Habitat features and watershed processes

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

|--|

 $^{^{99}}$ See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

 $^{^{101}}$ The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these

Partial prioritization of habitat conditions, and watershed processes were not identified or prioritized.

The strategy relies completely on limiting factors analysis, which results in an unprioritized list of the factors that appear to be impacting fish populations is provided. The

LE presentation pointed out that past forestry practices and road building have had impacts throughout the watershed, affecting all the subwatersheds. There are no major dams in the area, only a small human population, and no industrial pollution.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating:	Excellent ¹⁰²	<u>X</u> _Good	Fair	Poor
---------	--------------------------	----------------	------	------

habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

Actions within Nemah and Naselle are clearly prioritized, but not across or within other parts of LE area.

Geographic areas and limiting factors are not prioritized (by choice). For the Nemah and Naselle, excellent, prioritized lists of potential projects are provided. In other areas, the strategy gives narrative descriptions of projects that would be appropriate in each of the geographic areas.

They are not prioritized and they do not specify locations or specific projects within the subareas.

The level of detail in the specific recommendations for assessments is outstanding, and the strategy could guide project implementation even better if the restoration and protection projects were as clearly presented and prioritized for the other areas as they are for the Nemah and Naselle.

The project scoring is done with scoring sheets that reflect the general SRFB criteria, but do not tie clearly into the strategy.

4. Community issues

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹⁰³	Good	X_Fair	Poor

¹⁰³ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Community support for projects is noted but a strategic approach to address unmet needs is not included.

Project scoring and ranking processes take into account community issues.

The approach could be strengthened by considering which types of projects are likely to have support and by developing a plan for increasing support for needed high priority actions.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating: ___Excellent¹⁰⁴ ___X_Good ___Fair ___Poor

Narrative (rationale for rating):

The top ranked project, Johnson Creek restoration, shows up in the strategy as the 5th ranked project in the Naselle River subwatershed (higher ranked projects will need additional effort to get the private landowners to sign on).

Some of the other projects are mentioned, some are not.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	Excellent ¹⁰⁵	Good	<u>X</u> _Fair	Poor
---------	--------------------------	------	----------------	------

 $^{^{104}}$ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address

Given limitations in previous questions, it was difficult to understand the process and rationale for ranked list.

Not fully clear why Bear River appears on bottom of list.

The rank order appears fairly consistent with the strategy.

The top project is at least specifically called for in the strategy. For the others, it is impossible to know from the submitted materials how closely the rank order matches the strategic priorities.

Summary Narrative:

In general, the focus and specificity of the strategy are fair, and the fit of the list is good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a rather unfocused strategy).

RP encourages re-evaluation of approach to more strategically address community issue needs.

Lead Entity: Pend Oreille Conservation District

S	pecificity	and	Focus	of	Strateg	y
---	------------	-----	--------------	----	---------	---

1. Species and stocks¹⁰⁶

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ____Excellent¹⁰⁷ ___X_Good ____Fair ____Poor

Narrative (rationale for rating):

Species are identified (except brook trout) but status for all and rationale for prioritization could be clearer.

The project ranking criteria give preference for projects that benefit multiple species or unique populations of ESA-listed species.

The strategic priority of bull trout first, followed by westslope cutthroat trout and pygmy whitefish, could be more clearly expressed in the ranking criteria.

2. Habitat features and watershed processes

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

 $^{^{106}}$ See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and

Based on limiting factors analysis, habitat features are identified but not clearly prioritized.

Watershed processes are not clearly identified or prioritized.

Unlike most other strategies, this one acknowledges that the specific factor(s) currently limiting the salmonid populations is/are not known with certainty. Factors that are known to be significant are listed, as they are in other strategies.

The focus is more on habitat features than on watershed processes.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating: X Excellent Good Fair Poor

Narrative (rationale for rating):

Clearly identifies and prioritizes specific actions by subarea.

The clear and rational treatment of priority areas and priority actions within those areas is excellent, and is directly tied to the ranking criteria.

Identified actions are fairly specific, which should help guide project sponsors to the top priority actions.

supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹¹⁰	X_Good	Fair	Poor
---------	--------------------------	--------	------	------

Narrative (rationale for rating):

Among the best strategies in this rating category.

It would have received an "excellent" rating if actions associated with strategic intent were clarified.

The strategy clearly addresses community issues and priorities, but does not represent a strategic approach to addressing the highest priority biological needs.

The estimate of the level of community support for each action in the table of priority actions is excellent, as is the basic approach to encouraging implementation of supported projects while building support for high priority projects that don't currently have support.

Information about the specific methods for outreach and education could be improved.

¹¹⁰ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating: X Excellent 111

Good

Fair

Poor

Narrative (rationale for rating):

All three projects are in the highest priority areas.

The list of actions in the strategy is consistent with all three projects on the submitted list.

While there are some other actions that are identified as higher priorities than projects submitted in this round, they have less community support and apparently not ripe for this round.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	X Excellent 112	Good	Fair	Poor
	<u>/\</u> /		u	

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

The rank order of the list is consistent with the strategy.

The number one ranked project is clearly listed in the strategy as a higher priority action than the other two.

The assessment and the screening projects are both assigned the same priority.

The lower ranked Indian Creek screening project is in a basin that is ranked just above the other project, but the rationale for its fit on the list is clearly spelled out.

Summary Narrative:

In general, the focus and specificity of the strategy, and the fit of the list are very good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a fairly well focused strategy).

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: Pierce County

Specificity and Focus of Strategy

1. Species and stocks¹¹³

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent¹¹⁴ __X_Good ___Fair ___Poor

Narrative (rationale for rating):

All species and their status are identified and prioritized, but the rationale for project ranking priorities doesn't fully reflect those priorities.

The strategy describes the priority species and stocks and the rationale for making them priorities; however, it indicates that the process of describing all SaSI stocks and their status is still in progress. That information is provided in the summary, but it was not available to potential project sponsors and it has not been incorporated into the summary at this time.

The project ranking criteria give priority to "high benefit" projects without regard to species, etc.

2. Habitat features and watershed processes

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent115	X_Good	Fair	Poor
---------	--------------	--------	------	------

¹¹³ See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

Watershed processes are addressed but only weakly, and linkages between them and habitat features are weakly addressed.

The strategy describes and prioritizes the limiting factors based on EDT and other analyses. The discussion is primarily centered on habitat features rather than watershed processes, although it does talk about the impact of Mud Mountain Dam and the Lake Tapps diversion on habitat features.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating:	X_Excellent 116	Good	Fair	Poor
Marrativo	(rationale for rating).			

Narrative (rationale for rating):

Excellent but definition and delineation of specific actions could be improved.

The strategy identifies reaches and geographic areas and the activities that are prioritized there based on prioritized species and their habitat requirements.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹¹⁷	<u>X</u> Good	Fair	Poor

Narrative (rationale for rating):

Good outreach and support building, but there is no prioritization of needs or strategic approach to address them.

The strategy very clearly describes building support, and the ranking criteria include social and economic considerations to help build that support.

There is no discussion of specific types of projects that do and do not have community support, so it is difficult to determine whether the outreach program will build community support for identified stock, habitat/processes, action/area priorities.

Fit of the Project List to the Strategy

5. Actions and geographic areas

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

111111119	watershed processes, and	mining habitat ic	ataros.	
Rating:	<u>X</u> Excellent ¹¹⁸	Good	Fair	Poor

¹¹⁷ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The strategy indicates that all of the projects are identified high priorities, except that the strategy calls for LWD and riparian improvements in Boise Creek rather than relocation.

The feasibility study of the fish screen is particularly encouraging since the strategy suggested that sponsorship of such a project might not be available in the near term.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	X Excellent 119	Good	Fair	Poor
Normative (re	tionala far ration).			

Narrative (rationale for rating):

Projects on list are all identified as high priorities. However, it is unclear how scoring criteria relate to and are aligned with rank order.

The order of the list appears to be consistent with the strategy, and the fit is described well in the strategy summary.

¹¹⁹ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Summary Narrative:

In general, focus and specificity of the strategy are good and fit of the list is excellent.

The RP recognizes substantial progress with strategy development.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a somewhat unfocused strategy).

Note – LE intends to bolster strategic approach to identifying and addressing community issue needs.

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: Quinault Nation

Specificity and Focus of Strategy

1. Species and stocks¹²⁰

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating:	Excellent ¹²¹	Good	Fair	<u>X</u> _Poor

Narrative (rationale for rating):

Did not identify all stocks and their status.

Some stocks were prioritized as "stocks of concern." Rationale for prioritization is somewhat vague. The strategy lists stocks that are present, but does not detail their status or prioritize among them, other than to identify "stocks of concern."

Ranking criteria reflect priorities.

The summary does not list the stocks other than stocks of concern that are present.

The project ranking method does not use explicit criteria.

In an upcoming strategy revision, Queets Chinook, Queets coho, and Quinault sockeye are expected to be the highest priorities, and Quinault Chinook and Quinault coho will be designated as substantive priorities. These choices will be made based primarily on community (tribal) values such as cultural value and commercial value. In the presentation, the RP was informed about status according to the LFA (based on SaSI) and Quinault Indian Nation information.

¹²⁰ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent ¹²²	Good	X_Fair	Poor
---------	--------------------------	------	--------	------

Narrative (rationale for rating):

Some limiting factors were mentioned in the strategy summary, but they were not clearly prioritized in the strategy.

Weak use of watershed processes information.

Rationale exists but is weakly developed.

3. Actions and geographic areas

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

	DO the pr	oject runking criteria re	neet these priorit	103.	
Rat	ting:	Excellent ¹²³	Good	X_Fair	Poor

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

Areas are prioritized based on "species of concern." Actions are not clear or well developed in the strategy.

Areas are prioritized by where the most fish and fisheries are, which is correlated with the size and complexity of the salmon populations they support. Population size and priority are tightly correlated.

The strategy does not identify or prioritize protection and restoration actions, but the summary does give some potential types of projects that may improve conditions.

The project ranking criteria, while not fixed on a numerical scale, do give consideration to the priority geographic areas.

4. Community issues

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹²⁴	Good	Fair	X_Poor
---------	--------------------------	------	------	--------

¹²⁴ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Negligible treatment in strategy.

The strategy summary describes the community support for habitat restoration and its connection to maintaining sport fisheries.

The project ranking approach and open meetings provide for discussion of community issues.

Additional strategic guidance could be provided to potential project sponsors on what types of projects need to enjoy more community support.

There are very few stakeholder organizations active in the WRIA.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating: ___Excellent¹²⁵ ___X_Good ___Fair ___Poor

Narrative (rationale for rating):

All projects address the single high priority category. Note - this is a concern because stocks, habitat features and actions were not prioritized (i.e., leading to a higher rating than might otherwise have occurred).

All of the projects on the list are in the two top priority watersheds.

The strategy gives preference to projects that are broad in scale or affect watershed processes rather than site-specific conditions. It isn't clear that culvert replacements fit that preference, but they would match up well with the certainty of success criterion.

 $^{^{125}}$ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	Excellent ¹²⁶	Good	<u>X</u> _Fair	Poor

Narrative (rationale for rating):

The ranking process used was not articulated in strategy (but was discussed by the LE with the RP).

The scoring process was outlined (e.g., benefit/cost), but the rationale for ranking is unclear.

Though unable to show rationale, all projects fit with what was provided.

No information was provided on how the rank order of the projects fits the strategy other than saying that the top three are culvert projects and the next one is a broad-scale assessment.

Since the next two projects are also culvert replacements, it isn't clear what differentiated them in the rankings, even after reviewing the available data on the barriers. There may be a clear rationale, but it is not provided in the materials.

¹²⁶ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Summary Narrative:

In general, the specificity and focus of the strategy, and the fit of the list are relatively weak.

The rank order of the list is consistent with the level of specificity in the strategy (a reasonable but indeterminate fit to an unfocused strategy).

RP acknowledges LE is continuing to make progress with strategy development.

It appears limited amount of institutional capacity in this WRIA may contribute to this strategy being less well developed than most others.

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: San Juan Conservation District

Specificity and Focus of Strategy

1. Species and stocks¹²⁷

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent¹²⁸ ___Good __X_Fair ___Poor

Narrative (rationale for rating):

Species/stocks are Identified as to possible presence, but status information is lacking for <u>all</u> stocks.

Scoring criteria do not appear consistent with priority species in strategy.

Rationale for priorities is somewhat unclear.

The strategy identifies some stocks that are known to have been found in the WRIA as well as some that may or may not be found there.

Because of gaps in available data, it is not possible at this point to identify <u>all</u> of the stocks in the WRIA.

The strategy only includes status information for the three listed species, and there is no guidance or consideration given to unlisted species that may also use the area. Chinook are prioritized first, followed by the other listed species.

It is not clear from the materials provided whether the ranking criteria reflect the priorities.

¹²⁷ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent ¹²⁹	Good	<u>X</u> _Fair	Poor

Narrative (rationale for rating):

Strategy has conceptual emphasis.

Considerable information gaps.

Linkages to salmon are largely undocumented and strategic linkages to salmon are weak.

Reasonable emphasis is on eelgrass and forage fish as limiting factors (or processes).

Prioritization is limited.

The description doesn't address factors limiting stocks that utilize LE area (e.g., out of area effects, in context of the local migration corridor).

The summary discussion of limiting factors focuses on impacts to forage fish rather than salmon. The connection between the two is made, but there is no data presented to indicate the extent to which forage fish or eelgrass availability limit salmon populations relative to limiting factors identified and modeled in the freshwater systems.

Nearshore habitat features and their importance for migration and nursery grounds are discussed more in the strategy, but it concedes that habitat features in WRIA 2 do not appear to be limiting recovery.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?

• Do the project ranking criteria reflect these priorities?

Rating: Excellent ¹³⁰ X _ Good FairPoor	Rating:	Evcollopt ¹³⁰	V Cood	Enir	Door
	Rating.	EXCEILETT	<u>_</u> _G000	ган	P00i

Narrative (rationale for rating):

Description and prioritization of actions/areas is reasonable, given that limiting factors and processes were not prioritized.

Actions are identified to protect and restore eelgrass, forage fish spawning areas and habitat, but they are not prioritized.

The rationale for protection is supportable, but the recommendation for riparian vegetation restoration is not accompanied by a discussion of the severity of historical alteration and the impact on salmon and habitat.

There are geographic priority areas identified via previously funded nearshore assessment projects.

4. Community issues

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when

¹³⁰ In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

developii	ng and prioritizing proje	ct lists?		
Rating:	Excellent ¹³¹	Good	<u> </u>	Poor

General outreach and public participation could be better described.

Could be more strategic at addressing highest priority community issue needs.

The strategy does not mention community values or actions to build support except in the strategy summary. That section does include a process for ensuring stakeholder input, as well as actions to continue to build community support.

The strategy could be bolstered by being more explicit about what community values will be considered in ranking the projects.

¹³¹ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Fit of the Project List to the Strategy 5. Actions and geographic areas The Review Panel will consider: The extent the project list addresses the highest priority action and areas, and The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features. Excellent¹³² Good Rating: X Fair Poor Narrative (rationale for rating): All projects not highest priority actions or for highest priority species/stocks. For example, no projects are related to protection (highest priority in strategy). 6. Fit of project ranking The Review Panel will consider the extent the rank order of the project list addresses the highest priority: Stocks Limiting watershed processes Limiting habitat features Actions Geographic areas Community interests X Excellent¹³³ Rating: Good Fair Poor Narrative (rationale for rating):

Rank order appears to be consistent with the general priorities in the strategy.

Project list seems to emphasize filling information gaps not protection and restoration actions.

Summary Narrative:

In general, the focus and specificity of the strategy is fair, as is the fit of the list.

The rank order of the list is consistent with the level of specificity in the strategy

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

(an excellent fit to a fairly unfocused strategy).

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: Skagit Watershed Council

Specificity and Focus of Strategy

1. Species and stocks¹³⁴

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: X Excellent Good Fair Poor

Narrative (rationale for rating):

The strategy establishes three tiers of species based on threatened listings under ESA or depressed listing under SaSI or both, and it refers the reader to the limiting factors analysis for details on each of the stocks.

The project ranking criteria reflect the stock priorities.

A summary table of stocks and their status would be a useful addition to the strategy for potential sponsors that prefer to get all the key information in one document.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating: X Excellent¹³⁶ X Good Fair Poor

 $^{^{134}}$ See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these

Excellent rating but could have been more transparent.

Based on target areas, with the effect that features/processes are <u>indirectly</u> prioritized.

Watershed processes are identified (e.g., sediment, peak flows) for upper areas but not across full breadth of LE area, and limiting watershed processes are not clearly prioritized (other than in a target area).

The strategy could be improved if it prioritized habitat problems or suggested which processes should be addressed first, and if it better addressed linkages between watershed processes and habitat features.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

	1 - 1 - 1 - 1 - 1 - 1			
Rating:	Excellent ¹³⁷	X_Good	Fair	Poor

Narrative (rationale for rating):

Clearly identifies highest priority (target) areas (tiers) but lacks specific priorities within target areas.

The strategy identifies four general geographic first priority areas, with the estuary as the first among them.

For each area, it describes specific strategies and, in some cases, specific actions that can be taken to restore habitat. The priorities cover large areas and large numbers of actions.

Additional guidance on which reaches of the floodplain, etc., are more important would help guide project sponsors to most important areas first.

habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹³⁸	X Good	Fair	Poor

Narrative (rationale for rating):

Excellent outreach effort.

RP recognizes substantial recent expansion in stakeholder involvement (as per project list).

Need to be more strategic (prioritized) and more clear

Community actions not prioritized in strategy.

Strong organizational structure to ensure that stakeholders are involved in the process.

The strategy is not clear about specific, prioritized community actions to be taken to build support from people and groups that do not participate in the committees.

¹³⁸ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Fit of the Project List to the Strategy 5. Actions and geographic areas The Review Panel will consider: The extent the project list addresses the highest priority action and areas, and The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features. Excellent 139 X Good Rating: Fair Poor Narrative (rationale for rating): Very good alignment with priority stocks, areas, etc., but all projects are not in highest priority category. The high priorities in the strategy include large areas and large numbers of potential actions in those areas. Most of the projects are clearly in these priority areas. The two creek restoration projects near the bottom of the list are in a second-tier area and supporting second-tier species. 6. Fit of project ranking The Review Panel will consider the extent the rank order of the project list addresses the highest priority: **Stocks** Limiting watershed processes Limiting habitat features Actions Geographic areas Community interests

Rating: X_Excellent Good Fair Poor

Narrative (rationale for rating):

Rank order is generally consistent with the strategy.

A tier 1 project was on bottom of list because it was deemed not as technically sound as possible.

¹³⁹ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

The projects that are in the top priority areas and addressing the top priority species are at the top of the list.

One of the estuary projects in a tier 2 area ranks above an estuary project in a tier 1 first priority area, but the rationale for this was clearly articulated (based on the causeway project).

The mix of feasibility studies to develop future projects in priority areas is reasonable.

Summary Narrative:

In general, the focus and specificity of the strategy, and fit of the list are very good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a fairly well focused strategy).

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: Snake River Salmon Recovery Board/Asotin County

Specificity	y and	Focus	of	Strateg	ĮУ
-------------	-------	--------------	----	---------	----

1. Species and stocks141

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent¹⁴² __X_Good ___Fair ___Poor

Narrative (rationale for rating):

Species are identified but status of <u>all</u> is not provided.

Listed species are prioritized by tiers.

Since it does not distinguish between the priorities of endangered versus threatened stocks or stocks that may benefit more from early actions, the strategy is not focused on particular species as much as some others.

The ranking criteria give equal weight to the listed stocks except that sockeye are omitted because they are mainly in the mainstem.

2. Habitat features and watershed processes

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating: Excellent ¹⁴³ X_Good FairPoor
--

See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

The strategy uses an EDT-based approach to habitat features that is comprehensive and well presented, but watershed processes and related tools are not explicitly included.

Identified limiting factors include some watershed processes as well as habitat features, but the linkages between the watershed processes and habitat features is not discussed.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating:	Excellent ¹⁴⁴	X_Good	Fair	Poor
N1 1 *	/			

Narrative (rationale for rating):

The rationale for identified actions and areas is not clear.

The priorities in the strategy are very explicit: address imminent threats first, address habitat factors that are impacting survival second, and undertake other projects in reaches with ESA-listed species third.

Focus could be improved by concentrating on imminent threats in the high priority areas. Otherwise, a project such as a culvert on a stream with hardly any fish potential would still appear as a top priority.

4. Community issues

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

highest biological priority actions and areas?

- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating: ___Excellent¹⁴⁵ ___Good __X_Fair ___Poor

Narrative (rationale for rating):

The strategy identifies community issues but provides only a general approach at this time.

Linkages of community issues and process to project ranking is not transparent.

The strategy includes a good discussion of community issues and the types of projects that are or are not supported.

There is an ongoing public outreach effort, but it is not clear whether any specific actions are underway or planned to build community support where it does not currently exist for projects that have high biological benefits.

It is not clear how the project ranking criteria consider community issues.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas,
 and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating:	Excellent ¹⁴⁶	X Good	Fair	Poor

Narrative (rationale for rating):

The fairly large number of assessments on the list appears to contradict the stated intent to address imminent treats as the highest priority.

¹⁴⁵ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

All projects are not in highest priority areas (i.e., Touchet easement), and don't address imminent threats (i.e., assessment of landowner interest).

It is not entirely clear how projects like the assessment of landowner interest in conservation easements address imminent threats.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating: ____Excellent¹⁴⁷ ____Good ___X_Fair ____Poor

Narrative (rationale for rating):

Recognizing the important progress made in dealing with community issues in the area, it is unclear how projects were ranked, (e.g., how assessments fit in rank order), and what determined the final rank order.

It is unclear why the Coppei Creek project is below the Garfield County project, or why Walla Walla assessment is at the top of the list.

Summary Narrative:

In general, the focus and specificity of the strategy, and the fit of the list are fairly good.

Note - The list of projects is long, containing some projects that the LE indicated they would not pursue this round.

¹⁴⁷ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: Snohomish County

Specificity and Focus of Strategy

1. Species and stocks¹⁴⁸

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent¹⁴⁹ __X_Good ___Fair ___Poor

Narrative (rationale for rating):

Rationale for priority species/stocks identified, but not <u>all</u> stocks and their status was identified.

The strategy identifies Chinook and coho salmon and bull trout as the "proxy" species for all salmonids in the watershed, but does not clearly prioritize among the species.

The scoring criteria appear to give weight to unique populations of listed species and naturally spawning non-listed species.

2. Habitat features and watershed processes

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:Excellent ¹⁵⁰ X_Good	dFairPoor

¹⁴⁸ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and

Habitat features and watershed processes are identified but the rationale for prioritization is not clear and transparent.

The strategy does an excellent job of identifying and prioritizing habitat features that are limiting, and it describes some of the key watershed processes at the sub-watershed scale. It stops short of prioritizing watershed processes and linking them explicitly to the habitat features in a way that leads selection of projects at a meaningful scale.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating:	X_Excellent 151	Good	Fair	Poor

Narrative (rationale for rating):

Priority areas, types of projects, and some actions, are identified.

The characterization of sub-basins by location, habitat, and salmonid use leads to priority actions in different geographic areas. The rationale is clear, although complex.

The ranking criteria are tied directly to the high priority areas and actions identified in the strategy.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?

supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹⁵²	X_Good	Fair	Poor
---------	--------------------------	--------	------	------

Identifies issues, priorities and a strategy to address priority needs.

The strategy clearly identifies community issues and includes a well-developed set of actions to continue to build support for high priority actions, and the values are built into the criteria for certainty of success.

Prioritizing of actions could be more directly and clearly articulated.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating:	Excellent ¹⁵³	X_Good	Fair	Poor
---------	--------------------------	--------	------	------

Narrative (rationale for rating):

Good prioritization but all projects are not in highest category.

The projects are all consistent with the strategy, but they are not all in the highest priority areas. For example, the Alpine Baldy Road Decommissioning appears to be in a second priority headwaters area and it is not clear that the Groenveld Slough project is consistent with the watershed process approach.

6. Fit of project <u>ranking</u>

¹⁵² The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	X_Excellent 154	Good	Fair	Poor	
Narrative (rationale for rating):					
Rank order appears to be consistent with the priorities in the strategy.					

Summary Narrative:

In general, the focus and specificity of the strategy, and the fit of the list are good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a somewhat focused strategy).

¹⁵⁴ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: Stillaguamish

Specificity and Focus of Strategy

1. Species and stocks¹⁵⁵

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent¹⁵⁶ ___X_Good ___Fair ___Poor

Narrative (rationale for rating):

Two Chinook stocks are prioritized, but the rationale for only these two is unclear.

The strategy summary only lists and considers Chinook salmon, but the strategy itself lists other stocks.

The strategy is explicit about making Chinook a priority and presenting the rationale, but it does not distinguish between priorities of other stocks, including listed bull trout and candidate coho.

The scoring criteria are consistent with the stock priorities.

¹⁵⁵ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

2. Habitat features and watershed processesThe Review Panel will consider:Does the strategy clearly identify waters

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	Excellent ¹⁵⁷	X_Good	Fair	Poor
Norrative (rationale for rating).				

Narrative (rationale for rating):

Good approach to identifying habitat features and watershed processes. (This is among the best discussions of watershed processes reviewed by the RP.)

The strategy clearly sets out the limiting factors and watershed processes down to the reach scale. The reaches are then prioritized within the limiting factor categories, but there are no priorities established between limiting factors in the reaches. All limiting factors are treated equally.

The strategy summary establishes priorities for which watershed processes should be addressed first at the watershed level, but not necessarily at the reach level.

3. Actions and geographic areas

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

bo the project ranking criteria reflect these priorities?					
Rating:	X Excellent 158	Good	Fair	Poor	
Narrative (rat	ionale for rating):				

¹⁵⁷ The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

Very clear description and rationale for prioritization.

Ranking criteria may not capture prioritization as well as it could.

The strategy includes specific actions recommended in specific geographic areas. The actions are prioritized and linked to the limiting factors.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹⁵⁹	<u>X</u> _Good	Fair	Poor

Narrative (rationale for rating):

Good outreach approach. Approach emphasizes examples on public ownership first.

Does not to go far enough as a directed strategy, other than use of demonstration areas.

More was discussed in presentation than was provided in written materials.

The strategy describes some of the important community issues. It describes an approach to building community support by doing projects on public lands first.

It could be even stronger if it included additional prioritized actions for building community support.

¹⁵⁹ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

Rating: ____Excellent¹⁶⁰ _____Fair ____Poor

Narrative (rationale for rating):

The projects are all consistent with the strategy, although the strategy has some higher priority areas and actions than are in the current project list.

6. Fit of project <u>ranking</u>

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating: X Excellent Good Fair Poor

Narrative (rationale for rating):

Rank order is consistent with strategy, but strategy is incomplete or unclear in some respects (e.g., rationale).

That limiting factors were not prioritized tends to diminish value of ranking.

Summary Narrative:

In general, strategy focus and specificity, and fit of the list are good.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to an incomplete and strategy that is unfocused in some

 $^{^{160}}$ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

respects).

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: Thurston Conservation District

Specificity and Focus of Strategy

1. Species and stocks¹⁶²

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: ___Excellent¹⁶³ ___X_Good ___Fair ___Poor

Narrative (rationale for rating):

Stocks and status are clearly described but not prioritized.

Presentation of the stocks and their status is clear, but the decision not to prioritize makes it difficult to be confident that the investments in projects in this watershed are directed in a strategic manner.

It is not clear whether the statement in the summary that ESA-listed species are a high priority is reflected in the strategy or the ranking criteria. The ranking criteria are fairly general and non-specific regarding species, actions and areas.

2. Habitat features and watershed processes

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

	Rating:	Excellent ¹⁶⁴	X_Good	Fair	Poor
--	---------	--------------------------	--------	------	------

 $^{^{162}}$ See A Guide to Lead Entity Strategy Development, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

 $^{^{164}}$ The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these

Watershed processes are addressed but weakly.

The rationale for prioritization is not fully clear.

Several limiting habitat features and watershed processes are listed, but not prioritized. The rationale for not prioritizing them is clear, but it is still difficult to determine whether investments in projects will make progress toward strategic goals.

The ranking criteria are fairly general and non-specific regarding species, actions and areas.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating: ___Excellent¹⁶⁵ ___X_Good ___Fair ___Poor

Narrative (rationale for rating):

Did not specifically prioritize across areas, but is better within areas.

Although the strategy does not explicitly prioritize geographic areas, it does provide guidance about the types of projects that should be given emphasis in any given year.

The strategy lists several possible actions that can be taken to address the limiting factors. For each subwatershed, it lists high priority projects and programs and other projects and programs.

This two-tier approach gives some guidance about priorities, but there are so many high priorities that it would be even more useful to prioritize among them by species and/or geographic areas.

habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

Geographic priorities are slated for inclusion in the next iteration of the strategy.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹⁶⁶	Good	<u> </u>	Poor

Narrative (rationale for rating):

Outreach is good, but strategic aspects are limited by lack of specificity (at the subwatershed level), as are actions to address priority needs for community support.

Includes a list of specific actions that can be taken, but does not prioritize them.

Very clearly lists community values that can affect support for projects and provides recommendations for dealing with them (note – this is among the best in the state in this aspect of this rating category.)

Fit of the Project List to the Strategy

5. Actions and geographic areas

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

			<u> </u>		
Rating:	Ex	cellent ¹⁶⁷	Good	<u>X</u> _Fair	Poor

¹⁶⁶ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

 $^{^{167}}$ The entire project list addresses the highest priority actions and areas, benefiting the highest priority

Over half of projects are studies/feasibility/design. All projects do not appear to be fully consistent with the strategy.

Three of the five projects on the list are studies that may lead to projects.

One of them (nearshore) does commit to identifying and doing preliminary design on projects in the nearshore, which seems consistent with the strategy and SRFB guidance (but was not found it in the strategy).

It is not clear that there are commitments to implement projects based on the other two. The Capitol Lake study is called for in the strategy, but it will consider estuarine restoration and other alternatives, so the chosen alternative might not include estuarine restoration. Note – this project addresses an identified data gap in the strategy.

The water-typing project does not appear to be directed toward future projects and it was not found in the strategy.

The other two projects address fish passage, which is one of the myriad priorities mentioned in the strategy.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:Excellent ¹⁶	SGood	X_Fair	Poor
--------------------------------	-------	--------	------

Narrative (rationale for rating):

The ranking of the projects does not seem directly tied to the strategy.

The water-typing project, in particular, is not listed in the strategy yet it is ranked above a fish passage project specifically named in the strategy.

stocks and the highest priority habitat features and watershed processes.

The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

Since species and specific geographic priorities are not established in the strategy, the RP was unable to conclude that other projects on the list are ranked inconsistent with the strategy.

Summary Narrative:

In general, specificity and focus of the strategy are fairly good, and the fit of the list is fair.

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: Whatcom County

Specificity and Focus of Strategy

1. Species and stocks169

The Review Panel will consider:

- Does the strategy clearly identify all of the stocks in the WRIA(s) comprising the lead entity area?
- Is the status of each stock presented?
- Are one or more stocks prioritized for habitat restoration and/or protection actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?

Rating: X Excellent Good Fair Poor

Narrative (rationale for rating):

Very clearly identifies the status and priorities of all stocks.

The species and their listing status are clearly presented, along with some explanations of the status and recent data.

They are clearly prioritized with very clear rationale.

The project ranking criteria clearly give more points to projects that benefit the priority species.

The project ranking criteria are based on the benefits to specific species, and presumably different point values were assigned, but they are not listed in the strategy.

¹⁶⁹ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

2. Habitat features and watershed processes

The Review Panel will consider:

- Does the strategy clearly identify watershed processes (i.e., habitat forming processes) that are limiting factors for prioritized stocks?
- Does the strategy clearly identify habitat features (i.e., habitat conditions) that are limiting factors for prioritized stocks?
- Does the strategy prioritize limiting watershed processes?
- Does the strategy prioritize limiting habitat features?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the above priorities?

Rating:	X_Exc	ellent ¹⁷¹	Good	Fair	Poor

Narrative (rationale for rating):

Tables are very good, but narratives identifying and prioritizing habitat limiting factors and watershed processes would be very helpful.

The strategy describes watershed processes and emphasizes a process-based approach to protection and restoration.

The strategy could be improved by identifying the highest priority watershed processes, and addressing linkages between watershed processes and habitat features.

Restoration of habitat elements is given a lower priority and requires assessment and consideration of long-term treatments.

Through EDT, the strategy identifies the limiting factors that are important for individual reaches, and these are prioritized and used as a basis for project ranking.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?

•	Do the p	project ranking criteria rei	iect these prioritie	25?	
Ra	ating:	Excellent ¹⁷²	X_Good	Fair	Poor

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic

 $^{^{171}}$ The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

Very good.

Areas are prioritized but not specific actions.

The strategy describes a variety of actions that can be taken in pursuit of the objectives.

Actions are prioritized in general categories (i.e., protection above restoration above rehabilitation) and there are priorities for protection based on criteria, but not at the individual action or project level.

The tables that show which limiting factors are most important in which geographic areas, coupled with the descriptions of potential actions that address the limiting factors and often specific species or life stage, provide a clear path for identifying and prioritizing projects, which is the next best thing to listing and prioritizing specific projects.

4. Community issues

The Review Panel will consider:

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?
- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹⁷³	X Good	Fair	Poor
Narrative (r	ationale for rating):			
The connection	to community interests is no	nt fully clear in rankii	na criteria.	

areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

The strategy includes goals and some actions to build community support, and it recognizes that some projects that are not the top biological priorities might have added value because of the role they have in building community support.

Some community values that may affect prioritization are included.

Fit of the Project List to the Strategy

5. Actions and geographic areas

The Review Panel will consider:

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

	Rating:	Excellent ¹⁷⁴	Good	<u>X</u> Fair	Poor
--	---------	--------------------------	------	---------------	------

Narrative (rationale for rating):

Two of 5 projects are not in the highest priority area.

The strategy gives primary emphasis to protection and restoration.

The first project on the list is clearly consistent with the strategy, as it acquires a high priority area.

The remaining four projects however, are feasibility studies that are intended to lead to projects that restore habitat elements such as culvert blockages, logjams, and rip-rap.

The strategy calls for such assessment work prior to initiating such habitat restoration projects, but it makes this a lower priority than projects to restore watershed processes. One of them is in a top priority area, and one of them discusses possible habitat forming processes projects.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

Rating:	XExcellent ¹⁷⁵	Good	Fair	Poor

Rank order is consistent with strategy.

Projects that are most inconsistent with the strategy are at the bottom of the list.

The projects appear to be in the rank order that would be most consistent with the strategy, with the only on-the-ground project being an acquisition in a top priority area.

The studies appear to be ranked consistent with priority species and areas.

Summary Narrative:

In general, the focus and specificity of the strategy are very good, whereas the fit of the list is fair.

The rank order of the list is consistent with the level of specificity in the strategy (an excellent fit to a fairly well focused strategy).

¹⁷⁵ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

SRFB 5th Round Review Panel Ratings and Narratives

Lead Entity: Yakima River Basin Salmon Recovery Board

Specificity and Focus of Strategy			
1. Species and stocks 176			
The Review Panel will consider:			
Does the strategy clearly identify all	of the stocks in	the WRIA(s) co	mprising
the lead entity area?			
 Is the status of each stock presented 	! ?

Rating:Excellent ¹⁷⁸	_XGood	Fair	Poor
Narrative (rationale for rating):			

The strategy clearly identifies all salmonid species stocks in the lead entity area, and the status of each stock; one or more stocks are prioritized; there is a clear and supportable rationale presented to justify the priorities; and the project ranking criteria reflect these priorities.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these

¹⁷⁶ See *A Guide to Lead Entity Strategy Development*, October 10, 2003, for details.

The strategy clearly identifies limiting habitat features and watershed processes and prioritizes these habitat features and watershed processes for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the lead entity's ranking criteria reflect these priorities.

The strategy uses an EDT-based approach to identification of habitat features that is comprehensive and well delivered, but watershed processes and their linkages to habitat features are not clearly articulated.

The strategy identifies limiting factors for reaches, and the focus is more on habitat conditions and ecological functions than it is on habitat forming processes. The strategy lists up to five limiting factors for each reach based on EDT analysis. That list includes some watershed processes as well as some habitat features.

The link to the project evaluation questions is not fully clear.

3. Actions and geographic areas

The Review Panel will consider:

- Does the strategy clearly identify specific actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy prioritize actions for restoration and/or protection of targeted habitat features and watershed processes?
- Does the strategy identify specific geographic areas associated with prioritized actions?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect these priorities?

Rating: ___Excellent¹⁷⁹ __X__Good ___Fair ___Poor

Narrative (rationale for rating):

General limiting factors are identified and prioritized, but not specifically with regard to actions and areas (i.e., actions for reaches are not listed).

The strategy describes the limiting factors and presents a set of questions that can help sponsors and evaluators determine whether a project addresses them, but it does not go so far as to identify specific actions that could be taken.

Geographic areas are prioritized and the associated limiting factors are identified, but not specific actions.

4. Community issues

- Does the strategy clearly identify community issues and concerns regarding salmon habitat protection and restoration?
- Does the strategy propose specific actions for building or maintaining

In an excellent strategy: The strategy clearly identifies and prioritizes specific actions and geographic areas for the benefit of priority species and stocks; there is a clear and supportable rationale for these priorities; and the project ranking criteria reflect these priorities.

community support for salmon protection and restoration efforts? For the highest biological priority actions and areas?

- Does the strategy prioritize these actions?
- Does the strategy articulate what community values will be taken into consideration in evaluating and ranking projects?
- Is there a clear and supportable rationale for establishing these priorities?
- Do the project ranking criteria reflect the priorities?
- Does the strategy provide for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists?

Rating:	Excellent ¹⁸⁰	Good	Fair	<u>X</u> _Poor

Narrative (rationale for rating):

Community issues are not dealt with in the strategy; however, in the presentation the intent to bolster this in next strategy was expressed to the RP.

The strategy lists a goal to increase community involvement and an objective to educate the community, and the project evaluation includes an evaluation of whether the project has community support and partners.

However, the strategy does not identify community issues, and the summary simply says that all the biologically based high priority projects have community support.

Actions are not identified to strategically build and maintain community support.

Ranking criteria do not address community issues other than through CAG participation in the process.

Fit of the Project List to the Strategy

5. Actions and geographic areas

- The extent the project list addresses the highest priority action and areas, and
- The extent that those actions and areas benefit the highest priority stocks, limiting watershed processes, and limiting habitat features.

<u> </u>		J		
Rating:	Excellent ¹⁸¹	Good	XFair	Poor

¹⁸⁰ The strategy provides for an effective process for evaluating and weighing community values and taking these values into consideration when developing and prioritizing project lists; proposes specific actions for building or maintaining community support for highest biological priority actions and areas; lists community values that will be taken into consideration in project evaluation and ranking; and the project evaluation criteria reflect these priorities and values.

¹⁸¹ The entire project list addresses the highest priority actions and areas, benefiting the highest priority stocks and the highest priority habitat features and watershed processes.

This is the longest project list reviewed, which contains a very diverse array of projects.

All projects do not address highest priorities.

The first half of the project list addresses priority species with actions that the TAG determined were priority actions based on their evaluation method.

The TAG judged projects in the second half to not be priority actions or not addressing priority species.

Reflecting the local strategy and process, these projects should probably not be funded until all the top priority actions have been completed.

6. Fit of project ranking

The Review Panel will consider the extent the rank <u>order</u> of the project list addresses the highest priority:

- Stocks
- Limiting watershed processes
- Limiting habitat features
- Actions
- Geographic areas
- Community interests

Rating:	<u>X</u> Excellent 182	Good	Fair	Poor

Narrative (rationale for rating):

The rank order of the list appears to be consistent with the priorities in the strategy.

Since the strategy does not identify specific actions or watershed processes in a priority sequence, this is as good as can be done until the strategy is refined.

The strategy gives preference to habitat protection over restoration, and this is reflected in the order of the list.

Summary	Narrative:
---------	------------

 $^{^{182}}$ The rank <u>order</u> of the entire list of projects fits the priorities (stocks, habitat features, watershed processes, actions, geographic areas, community issues) presented in the strategy. That is, the highest ranked projects fit the highest priorities identified in the strategy and, if there are projects that address lower priorities in the strategy, they are lower in the list.

In general, the focus and specificity of the strategy are good (with the exception of community interests), and the fit of the list is fair.
